SYSTEM AND METHOD FOR CONTROLLING ACCESS TO DOWNLOADABLE RESOURCES

ABSTRACT OF THE DISCLOSURE

5   A system and method for controlling access to downloadable resources

on a network. Content download requests are received from a network service,

where the content download request includes access information. An access ticket

is created based on the access information, which includes various ticket fields to

store access parameters parsed from the access information. The access ticket

10   associated with a transaction request is retrieved using a ticket identifier

accompanying the transaction request. A download of desired content is authorized

based on the access parameters of the retrieved access ticket. When authorized,

the content is delivered to a user terminal identified by the access ticket.
